The global Plug-in PXIe Source Measure Units market size is predicted to grow from US$ 487 million in 2025 to US$ 1129 million in 2032; it is expected to grow at a CAGR of 13.0% from 2026 to 2032.

Plug-in PXIe Source Measure Units (PXIe SMUs) are modular, high-precision test instruments designed to be inserted into PXIe chassis slots, forming automated test systems in combination with other PXIe modules. These devices integrate voltage sourcing, current sourcing, precision measurement, and electronic load functions, supporting multi-channel parallel testing for semiconductor devices, battery modules, power electronics, and new energy applications. The key advantages lie in their flexible modular design, fast channel switching, and high measurement accuracy. Gross margins typically range from 45% to 55%, reflecting the high technical barriers due to precision circuit design and system integration requirements. Global production capacity is concentrated among leading manufacturers in North America, Europe, and Asia, with annual supply of approximately 40,000 units, serving research, industrial, and semiconductor testing markets.

Upstream, PXIe SMUs rely on high-precision ADC/DACs, low-noise amplifiers, multi-channel switching matrices, and ultra-stable resistors, capacitors, and relays. Downstream customers primarily include semiconductor wafer manufacturers, IC packaging and testing companies, power electronics suppliers, new energy battery and automotive electronics firms, and research institutions. Driven by trends such as semiconductor process miniaturization, high-voltage power devices, and growing testing requirements for new energy batteries, PXIe SMUs are evolving toward multi-channel, high-precision, high-speed, and system-level solutions to meet parallel testing and complex environment verification needs.
