The plum blossom coupling (also known as claw-type elastic coupling) is an elastic coupling composed of two metal hubs and an intermediate elastic plum blossom-shaped rubber or polyurethane element. It transmits torque and compensates for the misalignment between the two shafts through the deformation of the elastic claws. This type of coupling has a simple structure, is easy to assemble and disassemble, has good shock absorption performance and certain radial and angular compensation capabilities, and is widely used in small and medium power transmission systems, and is suitable for general mechanical equipment such as fans, water pumps, and conveyors.

United States market for Plum Blossom Coupling is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
