A plunger pin is a device used for positioning or securing an object. It is named so because its tip is designed as a pin. Other types of plungers include ball plungers (with a ball-shaped tip) and index plungers (which can be removed). The built-in spring in a plunger pin pushes the tip against the object for fixing and positioning. These pins are incorporated into various machines and are particularly useful in metal processing and semiconductor manufacturing.

The global Plunger Pin market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
