The global PMI Foam Carbon Composite Board market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

PMI foam carbon composite board is a cross-linked rigid structural foam material with a 100% closed-cell structure. Its uniformly cross-linked pore wall structure gives it outstanding structural stability and excellent mechanical properties. PMI foam plastic is currently a heat-resistant foam plastic with excellent strength and stiffness performance, which can meet the requirements of medium-high temperature, high-pressure curing and prepreg processes.

PMI foam is currently the hardest structural core material under the same density conditions. It has good compatibility with various types of resins and is suitable for use as a core material in high-performance sandwich structures.

United States market for PMI Foam Carbon Composite Board is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
