The global PMSM Servo Motor market size is predicted to grow from US\$ 14187 million in 2025 to US\$ 23431 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

A PMSM servo motor (Permanent Magnet Synchronous Motor servo motor) is a high-performance electric motor that uses permanent magnets in the rotor and a three-phase AC supply in the stator to generate a rotating magnetic field. Operating within a closed-loop control system (typically with an encoder or resolver), it enables precise control of position, speed, and torque. PMSM servo motors are widely used in industrial automation, robotics, CNC machines, and advanced motion control systems. In 2025, global PMSM Servo Motor production reached approximately 34.53 M units, with an average global market price of around US\$ 420 per unit. Annual production capacity is 44.27 M Units. Gross Profit Margin: 38%. The PMSM servo motor industry chain is well-structured, with clear upstream, midstream, and downstream segmentation. Upstream mainly consists of raw material suppliers such as rare earth permanent magnets (NdFeB), copper windings, silicon steel sheets, and electronic components like encoders and power semiconductors. Midstream is dominated by motor manufacturers and motion control companies that integrate design, assembly, and control systems. Downstream demand is driven by industrial automation, robotics, CNC machinery, semiconductor equipment, and emerging sectors such as humanoid robots and advanced manufacturing. The increasing penetration of automation and electrification continues to strengthen the entire value chain. PMSM servo motors represent one of the most critical enabling components in modern automation systems. Their value is not only in hardware performance but also in system-level integration with drives and control algorithms. In the future, growth will be driven by robotics (especially humanoid robots), high-end manufacturing, and localized supply chains in China and other emerging markets. Meanwhile, competition will increasingly focus on torque density, energy efficiency, and cost optimization rather than just basic performance, making this

a technology-intensive and strategically important industry.

United States market for PMSM Servo Motor is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
