A pneumatic deadweight tester is a type of pressure calibration instrument used to measure and calibrate pressure gauges, transmitters, and other pressure measuring devices. It consists of a piston-cylinder assembly, weights, and a pressure regulator. The tester operates based on the principle of balancing the force exerted by the weights on the piston against the pressure being measured. By adjusting the weights and pressure regulator, the tester can generate precise and accurate pressure readings. Pneumatic deadweight testers are commonly used in industries such as oil and gas, aerospace, and manufacturing for calibration and verification of pressure instruments.
