A Pneumatic Proportional Flow Control Valve is a type of valve used to regulate the flow of a gas (usually air) in a pneumatic system. It operates by modulating the flow rate of the gas in response to an external control signal, typically through the use of a proportional solenoid. This type of valve is commonly used in various industrial applications where precise and proportional control of pneumatic flow is required, such as in automated machinery, process control systems, and robotics. The ability to precisely adjust the flow of gas makes it suitable for applications where accurate control of pressure and flow is crucial.
