The Pneumatic Release Module (PRM) is a mechanical releasing control unit that offers superior detection by using a continuous linear pneumatic detection system instead of intermittent fusible link detectors. When the PRM detection line is exposed to a fire condition, the tubing ruptures, relieving all pressure in the tubing and accumulator, thus firing the system using a nitrogen cylinder. Some benefits of using the Amerex PRM in your Kitchen Fire Suppression System include no detection cable, no crimps, and no conduit or corner pulleys required in the detection line.

The global Pneumatic Release Module market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
