A pneumatic SMD feeder is a device used in the electronics manufacturing industry to automatically supply surface - mount devices (SMDs) to the placement equipment. It utilizes pneumatic power to operate, which provides a reliable and efficient way to handle small and delicate SMD components. The feeder consists of a magazine or tray that holds the SMDs, a pneumatic mechanism for indexing and advancing the components, and a nozzle or dispensing system for precisely placing the SMDs onto the conveyor or directly into the pick - and - place machine. Pneumatic SMD feeders are known for their high speed, accuracy, and ability to handle a variety of SMD package types, making them an essential part of the automated SMD assembly process. They help to increase production efficiency, reduce errors, and improve the overall quality of the electronic assembly.

United States market for Pneumatic SMD Feeder is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
