Pneumatic spray nozzle is a kind of device which can spray liquid and suspend in the air evenly. Its working principle is to squeeze the internal liquid into the nozzle through the internal pressure. An iron sheet is placed inside the nozzle. The high-speed liquid impinges on the iron sheet and rebounds to form atomized particles with a diameter of about 15-60 microns, which are ejected through the nozzle outlet. Pneumatic nozzles are widely used in various aerosol products, such as pesticides, air fresheners, pharmaceutical sprays, etc.
