A pneumatic spring diaphragm actuator is a type of actuator that uses the combination of compressed air and a spring to control mechanical movement. These actuators are commonly used in control systems to operate valves, dampers, and other mechanical devices. The actuator's design leverages a flexible diaphragm, which is compressed by pneumatic force, and a spring that provides a return force to move the actuator back to its original position. The spring diaphragm actuator is popular due to its reliability, simplicity, and ability to operate in environments with high cycle rates and limited maintenance needs.

United States market for Pneumatic Spring Diaphragm Actuators is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
