Pneumatic terminal crimping machine is an automated tool that uses compressed air as a driving force to firmly connect wires and terminals by cold pressing. It is widely used in industries such as wire harness processing, automotive electronics, home appliance manufacturing, and control cabinet assembly. The device triggers the cylinder-driven crimping die through a foot switch or button to quickly and accurately crimp various types of wiring terminals such as copper terminals, plug terminals, and tubular terminals. It has the characteristics of simple operation, high efficiency, good crimping consistency, and suitability for small and medium-sized batch production. Compared with manual crimping pliers, pneumatic terminal crimping machines can significantly improve production rhythm and crimping quality. Some models also support the replacement of multiple dies and are compatible with terminals of different sizes and shapes, suitable for automatic wire harness assembly and flexible production scenarios.

United States market for Pneumatic Terminal Crimping Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
