Pneumatic threaded cylinder is a mechanical device that uses compressed air to produce linear motion. They are used in various industrial and manufacturing applications, such as conveying systems, assembly lines, packaging machinery and other automation equipment. The pneumatic threaded cylinder consists of a cylindrical shell with a piston or plunger, which moves back and forth in the cylinder. Compressed air is directed into the cylinder to move the piston, thus moving the attached load.

Cylinders are usually equipped with threaded ends or mounting holes to facilitate connection to other components in the machine.
