The global Pneumatic Tire Changer market size is predicted to grow from US\$ 320 million in 2025 to US\$ 448 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2025, global production of pneumatic tire changers reached 96,000 units, with an estimated average selling price of US\$3,410 per unit. A pneumatic tire changer is a tire service device that uses compressed air as one of its primary power sources for separating, removing, installing, and assisting with inflation of automotive tires from rims. It includes a frame, turntable or center clamping mechanism, pneumatic grippers, tire bead separation shovel, installation/removal head, cylinder, valves, foot pedal control system, auxiliary arm, tire pressure rollers, inflation system, and motor drive system. It is mainly used in independent auto repair shops, tire specialty shops, tire chains, 4S stores, quick repair and maintenance shops, and fleet maintenance centers. The upstream of the industry chain includes steel, castings, machined parts, motors, gearboxes, cylinders, valves, seals, grippers, tire changing heads, and plastic protective parts; downstream customers are mainly auto repair shops, tire shops, 4S stores, fast repair chains, and fleet maintenance centers. Gross profit margin is approximately 20%-40%.

Globally, North America and Europe are the main markets for high-end equipment, while China is an important manufacturing and export base. The Asia-Pacific, Latin America, Middle East, and Africa regions are driven by the growth in car ownership and the upgrading of maintenance networks. In the future, the industry will continue to develop around full automation, upgrades to auxiliary arms, rim protection, EV tire adaptation, expansion of exports of Chinese-made products, enhanced after-sales service, and the upgrading of high-end store equipment.
