## Abstracts

The global Pneumatic Weapons Carriage and Release System market size is predicted to grow from US\$ 361 million in 2025 to US\$ 558 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

A pneumatic weapons carriage and release system is a mechanism that uses compressed air or gas to securely hold, carry, and release weapons, such as missiles, bombs, or other ordnance, from military aircraft or unmanned aerial vehicles (UAVs). Unlike traditional systems that rely on pyrotechnic or hydraulic energy, pneumatic systems use controlled bursts of compressed air to eject the weapon, providing smoother, quieter, and more precise deployment. This type of system is favored for its reliability, reduced maintenance needs, and minimized environmental impact, as it eliminates the use of explosives for release and can be more easily reused in rapid reloading situations.
