Pneumatic optical tables (sometimes called air tables) use pressurised air supports, which provide better isolation from floor vibrations than rigid supports. Most vibration sources in a lab are in this frequency range, so these stands are suitable for many labs. The pressurised support can be in the form of a frame with casters or four individual cylindrical legs.

The global Pneumatically Isolated Optical Tables market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
