POC ultrasound is a forward-moving examination method. During the examination of patients with acute illness, anesthesia, obstetrics and gynecology, and pain, it can obtain important information such as visual organ anatomy, functional status, and systemic hemodynamics to help clinical patients. Doctors can make more accurate assessments and provide reliable information for subsequent treatment. They can participate in the entire clinical diagnosis and treatment process from preliminary diagnosis to initial treatment to efficacy evaluation and adjustment plan. As a technical means for multi-disciplinary, multi-system, and multi-organ evaluation, POC ultrasound will be the trend and key link in the professional development of various clinical disciplines, and has very broad clinical application prospects.
