PoCUS is the abbreviation of point-of-care ultrasound, which refers to ultrasound examinations performed by clinicians at the bedside and interpretation of the results. It is goal-oriented and is used to guide clinical diagnosis, treatment and operations. POCUS can be regarded as an extension of the physical examination and the second pair of eyes for emergency doctors, known as the 'visible stethoscope.' If POCUS examination is performed promptly in emergency situations such as cardiac tamponade, pleural effusion, and pneumothorax, it can not only save the child's life, but also potentially improve the child's prognosis.
