The global POE Encapsulation Film market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

POE film has high water resistance and high PID resistance, and is suitable for high-efficiency photovoltaic modules. POE film is a photovoltaic encapsulation film. Compared with EVA film, POE film has better aging resistance, low water vapor transmission rate and PID resistance. Its water vapor transmission rate is only about 1/8 of that of EVA film, and POE film will not decompose and produce acetic acid when it comes into contact with water, which can effectively reduce the PID effect. With its excellent comprehensive performance, POE film is mainly used in high-efficiency photovoltaic modules such as double-glass and N-type, which can effectively improve the service life and power generation efficiency of photovoltaic modules.

United States market for POE Encapsulation Film is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
