The report requires updating with new data and is sent in 48 hours after order is placed.

The global POE Ethernet Switch market size is projected to grow from US$ 4036.1 million in 2022 to US$ 6682.6 million in 2029; it is expected to grow at a CAGR of 7.5% from 2023 to 2029.

As the demand for bandwidth & high data speed is continuously increasing along with growing number of internet users across the globe hence, Ethernet switch market is expected to experience decent growth during forecast period.

PoE (Power over Ethernet) describes any of several standardized or ad-hoc systems which pass electrical power along with data on twisted pair Ethernet cabling. This allows a single cable to provide both data connection and electrical power to devices such as wireless access points or IP cameras. Unlike standards such as Universal Serial Bus which also power devices over the data cables, PoE allows long cable lengths. Power may be carried on the same conductors as the data, or it may be carried on dedicated conductors in the same cable. A POE switch is a network switch that has Power over Ethernet injection built-in. Simply connect other network devices to the switch as normal, and the switch will detect whether they are POE-compatible and enable power automatically.
