Abstracts

The global POE Film market size is predicted to grow from US\$ 2602 million in 2025 to US\$ 4420 million in 2031; it is expected to grow at a CAGR of 9.2% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

POE film is a photovoltaic module packaging material. POE film has low water permeability and high resistance to PID (potential-induced decay).

Driver

Renewable Energy Growth: The global push towards clean energy, especially solar power, drives demand. As governments worldwide set ambitious renewable energy targets (e.g., net - zero emissions goals), the installation of PV modules surges, directly increasing the need for POE film as a crucial encapsulation material.

Superior Performance: POE film's superior weather resistance, anti - PID (Potential Induced Degradation) capabilities, and long - term durability compared to traditional EVA (Ethylene - Vinyl Acetate) films make it the preferred choice for high - efficiency, long - lifespan PV modules, attracting both manufacturers and installers.

Technological Advancements: Continuous R & D efforts improve POE film properties, such as enhancing light transmittance and reducing costs through new production processes, further stimulating market growth.

Challenge

High Production Costs: POE film production relies on specialized raw materials and complex manufacturing processes, resulting in higher costs compared to EVA films. This price gap hinders wider adoption, especially in cost - sensitive markets.

Limited Supply Chain: The global supply of POE resins, the main raw material for POE films, is concentrated among a few major petrochemical companies. Any disruptions in resin production (e.g., raw material shortages, geopolitical issues) can cause supply chain bottlenecks and price volatility.

Intense Competition: While the market grows, competition intensifies among POE film manufacturers and alternative encapsulation materials (like EPE, TPU). Companies must constantly innovate and optimize costs to maintain market share.
