A PoE switching hub is a switching hub with the ability to supply power through its Ethernet ports.

PoE stands for 'Power over Ethernet' and refers to the ability to supply power to powered devices via Ethernet cables (so-called LAN cables), and is used by connecting devices that support the POE standard to each other via Ethernet cables.

A switching hub is a device that efficiently relays a network when multiple computers communicate with each other, using the Ethernet communication standard and relaying computer traffic through an Ethernet port. Switching hubs were introduced in the 1990s. At that time, 10 Gbps was the typical network speed, but today, the speed has increased to 100 Gbps or even higher, and switching hubs are now available that support this speed.

The global POE Switching Hub market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
