The global PoE Unmanaged Switch market size is predicted to grow from US\$ 1293 million in 2025 to US\$ 1716 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

In 2025, global PoE Unmanaged Switch production reached approximately 17,600 k units with an average global market price of around US\$ 75 per unit, and a gross profit margin of approximately 10%-30%. A PoE unmanaged switch is a plug-and-play Ethernet switch that provides basic Layer-2 forwarding while delivering Power over Ethernet (PoE) to connected devices such as IP cameras, Wi-Fi access points, VoIP phones, IP speakers, and access control terminals. "Unmanaged" means it typically requires no configuration for VLANs, QoS policies, or advanced security features; users connect power and network cables and the switch automatically negotiates link speed and, for standards-based PoE (IEEE 802.3af/at/bt), detects compatible powered devices and supplies power within defined limits. Most models offer a fixed number of PoE ports (e.g., 4/8/16/24) with a specified total power budget and may include uplink ports (RJ45 and/or SFP) to connect to routers, NVRs, or core switches. Some designs add practical field features such as long-range PoE modes for extended cable runs, PoE watchdog/auto-reboot to recover frozen endpoints, and ruggedized enclosures for industrial or outdoor cabinets.

Upstream, the supply chain includes Ethernet switching chipsets, PoE controller ICs and DC-DC power modules, magnetics (transformers/chokes), RJ45 connectors and PHY components, power supplies (internal AC or external adapters), PCB assemblies and passive components, metal/plastic housings, fans/thermal parts for higher PoE budgets, and firmware for basic PoE detection and port behavior. Midstream activities cover hardware and power design (PoE budgeting, surge/ESD protection, thermal

management), electromagnetic compatibility and safety compliance, manufacturing/SMT assembly, functional testing (link performance, PoE negotiation, overload/short protection), burn-in, and packaging. Downstream demand is driven by installers, security and AV integrators, IT resellers, and end users in SMB offices, retail chains, hospitality, education, healthcare, warehouses, and industrial sites that need quick PoE edge expansion; aftermarket activity typically involves warranty replacements, power adapter swaps, spares stocking, and upgrades to higher-budget PoE+ or PoE++ models as endpoint power needs grow.

United States market for PoE Unmanaged Switch is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for PoE Unmanaged Switch is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
