Point Source Carbon Capture Device (PSCD), which means extracting carbon dioxide directly from the air, is based on a series of chemical reactions such as adsorption, and then storing it safely and permanently. The only reasonable method of disposal is geological storage, which is being used by many companies to combat the current state of global warming in order to meet the net-zero emission targets of the Paris Agreement. The captured CO₂ can also be used in agriculture, food processing or combined with hydrogen to produce synthetic fuels.

The global Point Source Carbon Capture Device (PSCD) market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
