In a point-supported glass system, glazed panels are connected together with spider fittings. They are not load-bearing, so they are easily the perfect solution for large spaces that need to serve multiple purposes.

The spider fittings that connect the glazed panels transfer the loads to a glass structural support fin which is fixed to the floor and ceiling. In some applications, the glass fin can be suspended since it provides a structure for the point-supported glass. This provides the opportunity for even greater creativity and design flexibility.
