Mobile backhaul system refers to the network infrastructure that connects mobile base stations (such as cell towers or base transceivers) to the core network of a telecommunications provider. This system is crucial for transmitting data, voice, and signaling between the mobile network's access layer and its central components, such as switches and data centers. Wireless backhaul infrastructure includes point-to-point (PtP) and point-to-multipoint (PtMP) microwave (MW) and millimeter wave (mmW) equipment. Wireless backhaul is widely used where deploying fiber is not feasible, cost-efficient, or possible due to time constraints.
