## Abstracts

The global Polar Aluminum Electrolytic Capacitors market size is predicted to grow from US$ 4163 million in 2025 to US$ 5447 million in 2032; it is expected to grow at a CAGR of 4.4% from 2026 to 2032.

In 2025, global production of Polar Aluminum Electrolytic Capacitors reached approximately 152.0 billion units, with an average price of around USD 0.028 per unit. Polar Aluminum Electrolytic Capacitors are liquid aluminum electrolytic capacitors with definite positive and negative polarity, utilizing high-purity anode aluminum foil with an aluminum oxide dielectric layer formed by anodization, and cathode aluminum foil paired with electrolyte as the cathode, achieving self-healing capability through the anodic oxidation repair characteristics of the electrolyte. They offer core advantages including high volumetric capacitance, extremely low cost, wide operating voltage range (4V to 600V), and mature stable manufacturing processes. Product construction consists of anode aluminum foil, cathode aluminum foil, electrolytic paper separators, liquid electrolyte, aluminum case, and rubber sealing plug. By lead configuration, they are classified into radial lead types (through-hole) and axial lead types, with case sizes covering diameters from ?4mm to ?25mm and capacitance ranging from 0.47?F to over 33,000?F. Major applications include switching power supply input/output filtering, power adapters, LED lighting drivers, consumer electronics motherboards, inverter air conditioners, industrial power supplies, communication equipment power supplies, automotive electronics, and general-purpose power supply filtering, coupling, and energy storage circuits, representing the largest shipment volume and broadest application coverage among all aluminum electrolytic capacitor families.

The global Polar Aluminum Electrolytic Capacitors market is in a mature and stable phase characterized by dominant replacement demand, representing the largest basic

category within the aluminum electrolytic capacitor industry. Traditional application segments including consumer electronics, power adapters, LED lighting, and home appliances constitute the core demand base, while industrial automation equipment, new energy vehicle charging infrastructure, automotive electronics, and communication power supplies are providing stable incremental growth. This product maintains irreplaceability in mid-to-low-end general-purpose applications due to its extremely low unit cost and mature supply chain ecosystem, though overall market growth has entered a mid-to-low range. Technological development is focused on development of higher specific capacitance anode foils, optimization of low-impedance high-stability electrolyte formulations, breakthrough of packaging processes enabling same capacitance in smaller physical volumes, and extension of service life under high-temperature and high-humidity conditions through material and structural improvements. Future expansion of new energy vehicle charging infrastructure, growth in industrial power supply demand, increasing home appliance penetration in emerging markets, and cyclical replacement demand for existing equipment will collectively sustain the enormous shipment volumes of Polar Aluminum Electrolytic Capacitors, while products will continue to upgrade toward higher performance and enhanced reliability.
