## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The polar region is one of the sensitive regions that affect the global climate. For a long time, there is a lack of polar meteorological observation data. The poles of the earth are increasingly becoming the focus of scientists. The north-south direction can only move in a very small range, which makes the satellites in orbit very crowded. The development of polar satellite communication will promote the further understanding of nature.
