The global Polariscope Strain Viewer market size is predicted to grow from US\$ 70.4 million in 2025 to US\$ 96.0 million in 2031; it is expected to grow at a CAGR of 5.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A Polariscope Strain Viewer is an optical instrument designed to detect and analyze internal stress and structural defects in transparent or translucent materials, such as plastics, glass, and polymers, through the principle of birefringence. It operates by passing polarized light through a specimen and observing how stress-induced variations in refractive index alter the light's polarization state, creating visible patterns (e.g., colored fringes or dark bands) that reveal stress distribution. Key components include a light source (e.g., LED, sodium lamp, or CFL), polarizing filters (polarizer and analyzer), and a viewing stage to position the sample at specific angles (e.g., 45° or 90°) for detailed inspection. The instrument is widely used in manufacturing industries, particularly for PET preforms, where it identifies residual stress from molding processes that could compromise bottle integrity during subsequent blow-molding or use. By comparing observed patterns against standardized defect charts, operators can classify issues like thermal degradation, uneven cooling, or molecular orientation defects. Advanced models integrate digital imaging and AI algorithms to automate analysis, providing quantitative data on strain magnitude and distribution. This non-destructive testing method ensures compliance with regulatory standards (e.g., FDA, ISO) and supports quality control by enabling early defect detection, reducing waste, and optimizing production processes. Polariscope strain viewers are also critical in materials

science research for characterizing stress in composites, optical components, and gemstones.
