The global Polarization Beam Splitter(PBS) and Combiner(PBC) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Polarization beam splitters and combiners are optical devices based on the polarization-maintaining fiber technology, used to combine or separate the polarization states of optical signals. The polarization beam combiner is mainly used to combine multiple input optical signals into one output according to a certain ratio, and the polarization beam splitter is used to separate an input optical signal into multiple outputs according to a certain ratio.

Polarization beam splitters and combiners have the characteristic of maintaining the polarization state of optical signals and can provide high optical performance and stability. They are widely used in fiber optic communications, laser systems and other fields, providing flexibility and reliability for the design and application of optical systems.
