Polarization-Maintaining components (PM components) are designed to control and preserve the polarization state of light propagating through them. They are essential in maintaining the polarization orientation of the light. Generally, Polarization-Maintaining components are referring to Polarization-Maintaining Splitters/Couplers, Polarization-Maintaining Isolators, Polarization-Maintaining Filters, Polarization Controllers, Polarization-Maintaining Collimators, and Polarization-Maintaining Patch Cords. They enable precise control, manipulation, and maintenance of polarization alignment in optical systems, leading to good reliability, accuracy, and sensitivity. Polarization maintaining fiber components is crucial in a wide range of applications, which promotes optimal performance and functionality. In a Telecommunications network, the Polarization-Maintaining components work for polarization-sensitive signal routing, polarization division multiplexing (PDM), and coherent optical communication systems. In Fiber Optic Sensing, PM components play an essential role in distributed temperature sensing (DTS), fiber optic gyroscopes (FOGs), and polarization-sensitive interferometry. In Laser Systems, polarization maintains fiber components control and stabilize the polarization state of laser light, improving laser performance and beam quality. Additionally, Polarization-Maintaining components enable polarization-sensitive imaging of biological tissues and structures.
