## Abstracts

The global Polarization-preserving Fiber Boron-doped Stress Bar market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Stress bars are typically used in PMFs to induce controlled stress within the fiber and optimize the fiber's polarization-maintaining characteristics. The application of stress can create birefringence in the fiber, which helps maintain the polarization state of light. Different methods can be used to impose stress on the fiber, such as boron doping, side grooves, or applying external mechanical stress.
