## Abstracts

The global Polishing Line market size is predicted to grow from US\$ 128 million in 2025 to US\$ 189 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

In 2025, global sales of Polishing Line reached approximately 320 units, with an average market price of about USD 410,000 per unit, an annual production capacity of roughly 350 units, and an industry-average gross margin of approximately 22%.

A Polishing Line is an integrated automated system used for continuous grinding, honing, pre-polishing, polishing, and mirror-finishing of slabs such as marble, granite, quartz, and quartzite. It usually consists of conveyors, multiple polishing/grinding spindles or beams, abrasive wear monitoring and compensation systems, PLC-based controls, water spray and dust-control units, plus auxiliary modules such as scanners, weighing devices, waxing units, or protective-film applicators. Official manufacturer information shows that this type of line is designed for industrial-scale continuous processing, with the main purpose of improving gloss, surface consistency, throughput, and yield, and it can be customized according to stone type, slab thickness, and automation level.

From the industry-chain perspective, the upstream side mainly includes machine frames and steel structures, castings, spindles and motors, inverters and PLCs, electrical components, hydraulic and pneumatic parts, conveyors and roller tables, diamond tools and resin abrasives, as well as cooling-water and dust-control systems. The downstream includes processors of natural stone, engineered stone, and quartz slabs, as well as fabricators serving building facades, flooring, kitchen countertops, bathrooms, commercial spaces, and premium interior decoration projects. Official sources also indicate that polishing lines are rarely sold as isolated standalone machines; they are often linked with calibrating, resining, scanning/sorting, waxing, and

film-protection processes to form a complete slab-processing line. Therefore, end-market demand is strongly tied to construction finishing, commercial buildings, infrastructure, and premium home-surface material consumption.

The Polishing Line market is a specialized segment of the broader stone processing equipment industry, serving manufacturers of marble, granite, quartz, and engineered stone slabs that require high-throughput, high-consistency surface finishing. Demand is mainly driven by construction, interior decoration, countertops, flooring, and facade applications, especially where premium surface quality and production efficiency matter. The market is characterized by relatively high equipment customization, with buyers focusing on automation level, polishing quality, throughput speed, durability, and compatibility with different slab materials. Competition is led by established European suppliers in the premium segment and increasingly by cost-competitive Asian manufacturers in the mid- and lower-end market. Overall, the industry remains supported by ongoing investment in stone fabrication capacity, rising expectations for finish quality, and the gradual shift toward more automated, integrated production lines rather than standalone polishing machines.
