Pollen Supplements are formulated nutritional products designed to supplement or replace natural bee-collected pollen when it is scarce or nutritionally inadequate. Unlike raw bee-collected pollen, these are engineered diets typically composed of a blend of protein sources (such as soy flour, brewer's yeast, whey protein, or pea protein), carbohydrates, fats, vitamins, and minerals. They are scientifically balanced to provide the essential amino acids and lipids necessary for honey bee brood rearing, royal jelly production, and the overall longevity of worker bees, particularly during periods of environmental pollen shortage.

In 2025, global Pollen Supplements production reached approximately 32000 MT, and average price was US\$26,000/Ton, with gross margin 50%
