Poly-L-lactic acid (PLLA) filler is a biodegradable, biocompatible synthetic polymer used in aesthetic medicine for facial volume restoration and wrinkle reduction. PLLA stimulates collagen production, leading to gradual and natural-looking improvements in skin texture and firmness. It's commonly used for deep facial wrinkles, nasolabial folds, and volume loss in the cheeks and temples. Unlike traditional fillers, PLLA results develop over several months as the body produces new collagen around the injected material. The effects of PLLA fillers can last up to two years, making them a popular choice for long-term facial rejuvenation.
