## Abstracts

The global Polyacrylamide Nanospheres market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Polyacrylamide nanospheres are a type of nano-scale granular material made of polyacrylamide, which has excellent physical and chemical properties. It exhibits extremely strong adsorption capacity and rheological properties through its high specific surface area and adjustable particle size. In the tertiary oil recovery process of oil fields, polyacrylamide nanospheres can improve oil displacement efficiency, regulate the water injection flow path by blocking the formation pores, and increase the recovery rate. In addition, it can be used to adsorb heavy metals and organic pollutants and purify water quality in environmental pollution control. The advantages of polyacrylamide nanospheres include their biocompatibility, chemical stability, and surface functionalization properties. They can be modified according to different needs and are a functional material with wide application potential.

United States market for Polyacrylamide Nanospheres is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Polyacrylamide Nanospheres is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
