Polyaluminium ferric bisulphate is also known as composite aluminium ferric bisulphate. Polyaluminium ferric bisulphate is a new type of high-efficiency water purifier composed of inorganic polymer polysulfide ferric chloride and polysulfide aluminium chloride, which is formed by polymerizing an appropriate amount of high-efficiency water purifier polyaluminium chloride and introducing an appropriate amount of synergist SO₄²⁻ ions on the basis of high-efficiency water purifier polyaluminium chloride. This product has the characteristics of high content of effective ingredients, high basicity, and high degree of polymerization. Its molecular chain network is dense and its structure is huge, which gives it stronger adsorption and coagulation ability and better purification effect in the process of water purification.
