Abstracts

The global Polyamide Resin (PA) market size is predicted to grow from US\$ 26028 million in 2025 to US\$ 35462 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

Polyamide resin refers to a type of polymer resin material with amide groups in the main chain, commonly known as nylon resin. It is mainly produced by the condensation of diamines and diacids, or by the polymerization of monomers such as lactams and amino acids. Its main products include PA6, PA66, PA610, PA612, PA11, PA12, PA46, PA6T, PA9T, PA10T, PA MXD6, and copolymer polyamide. Polyamide resin has high mechanical strength, wear resistance, oil resistance, fatigue resistance, self-lubricating properties, and good processing performance. It is widely used in fields such as automobiles, electronics, packaging films, industrial components, fiber spinning, oil and gas pipes, coatings and inks, adhesives, 3D printing, consumer goods, and medical devices. There are significant differences in the performance of different types of polyamide resins, among which PA6 and PA66 belong to bulk engineering plastics. Long chain polyamides emphasize low water absorption, flexibility, and chemical resistance, while high-temperature polyamides are more suitable for applications in heat-resistant electronic, electrical, and automotive high-temperature components. In 2025, global Polyamide Resin (PA) production reached approximately 3,132 K MT with an average global market price of around US\$ 8,495 per MT.

The polyamide resin market is showing a stable growth, structural upgrading, and high-performance trend overall, with demand mainly coming from automotive lightweighting, electronic and electrical miniaturization, packaging barrier material upgrading, industrial component engineering plastic substitution, 3D printing, and expansion of new energy applications. PA6 and PA66 are still the main market players, and their prices and

supply and demand are greatly affected by upstream raw materials such as caprolactam, adipic acid, and hexamethylenediamine; PA11, PA12, PA610, and PA612 are long-chain polyamides that benefit from the demand for automotive pipelines, oil and gas pipes, sports consumer goods, and 3D printing, with higher added value; Special polyamides such as PA6T, PA9T, PA10T, MXD6 have benefited from the growth of high-temperature connectors, electronic components, barrier packaging, and high-end engineering applications. The focus of future industry competition will shift from competition in ordinary nylon production capacity and price to competition in high-temperature, long-chain, low water absorption, flame retardant enhancement, low-carbon recycling, bio based nylon, stable supply chain, and customer formula adaptation capabilities. Overall, polyamide resin is an engineering resin material with wide demand, mature industrial chain, but significant room for structural upgrading. Its future growth will mainly come from new energy vehicles, electronics and electrical, high-end packaging, industrial substitution, and the localization of special polyamides.
