A Polycarbonate Canopy is a durable and lightweight overhead structure designed to provide shelter and protection from environmental elements such as rain, snow, and ultraviolet (UV) radiation. Constructed using polycarbonate panels—a thermoplastic material renowned for its high impact resistance and optical clarity—these canopies are often supported by frames made of aluminum, steel, or other robust materials. Polycarbonate canopies are favored in architectural applications for their ability to transmit natural light while offering superior strength compared to traditional glass, making them suitable for both residential and commercial settings. Their versatility allows for various designs, including flat, arched, and dome-shaped structures, catering to aesthetic and functional requirements.?
