The global Polycarbonate Plastic market size is predicted to grow from US\$ 12734 million in 2025 to US\$ 16383 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

Polycarbonates (PC) are a group of thermoplastic polymers containing carbonate groups in their chemical structures. Polycarbonates used in engineering are strong, tough materials, and some grades are optically transparent. They are easily worked, molded, and thermoformed. Because of these properties, polycarbonates find many applications.

Polycarbonate (PC), with its advantages of lightweight, high impact resistance, and light transmittance, is replacing traditional materials. Here are its core growth engines:

Automotive and Transportation: In the new energy vehicle sector, PC is used to manufacture interior and exterior components such as panoramic sunroofs, headlight lenses, and smart front fascias. Its lightweight properties directly contribute to improved driving range. Simultaneously, the development of the low-altitude economy has also driven demand for PC, used in the manufacture of windshields and cockpit structural components for flying cars.

Electronics and Appliances: PC is the second largest engineering plastic, widely used in smartphone casings, charging pile housings, and electrical insulation components. Flame-retardant PC is a key material for charging infrastructure.

Construction and Healthcare: In the construction sector, PC sun panels and endurance sheets are used for skylights and sound barriers. In the healthcare sector, with

accelerated domestic substitution, PC is used to manufacture high-value-added consumables such as hemodialysis machines and surgical instruments.
