Polycrystalline diamond compact blanks (PCD for short) is a composite superhard material sintered with diamond mixed powder and cemented carbide matrix under high temperature and high pressure. The diamond crystals in the diamond layer of PCD are disordered, isotropic, without cleavage planes, and have the high hardness, high wear resistance and high thermal conductivity of diamond; the cemented carbide layer as the substrate has high impact toughness and high thermal conductivity. Solderability. Therefore, PCD is especially suitable for non-ferrous and non-metallic cutting tools and supporting wear parts of various instruments and equipment.
