Polycrystalline Silicon Photovoltaic System is a type of solar power generation system that uses polycrystalline silicon wafers as the primary photoelectric conversion elements. The photovoltaic panels in this system are composed of many small single-crystal regions, which although have slightly lower efficiency than single-crystal silicon systems, are widely used in commercial and residential photovoltaic projects due to their lower cost and simpler production process. Polycrystalline silicon photovoltaic systems offer relatively stable generation efficiency and benefits within a certain investment cost and lower maintenance requirements.
