The report requires updating with new data and is sent in 48 hours after order is placed.

Polycrystalline silicon solar cells have the advantages of high conversion efficiency and long life of monocrystalline silicon solar cells, and the material preparation process of amorphous silicon thin film solar cells is relatively simplified. The conversion efficiency of the new generation solar cells is generally about 17-18%, which is slightly lower than that of monocrystalline silicon solar cells. There is no obvious efficiency degradation problem, and it may be prepared on cheap substrate materials, Its cost is much lower than that of monocrystalline silicon battery, but its efficiency is higher than that of amorphous silicon thin film battery.
