The global Polyester Catalyst market size is predicted to grow from US\$ 839 million in 2025 to US\$ 1148 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

A polyester catalyst is a substance used to accelerate the chemical reaction in the production of polyester materials, such as polyethylene terephthalate (PET). These catalysts are typically used in the polymerization process to facilitate the reaction between acids (like terephthalic acid) and alcohols (like ethylene glycol) to form polyester polymers. In 2025, global Polyester Catalyst production reached approximately 49.6 K MT.

The primary driver of the polyester catalyst market is the continued growth of polyester and PET production across packaging, textiles, films, and industrial materials. As demand for bottled beverages, food packaging, polyester fibers, and specialty films rises, producers require reliable catalysts to support large-scale polymerization. Since catalysts are essential inputs in PET and polyester manufacturing, market growth is closely tied to capacity expansion in Asia, especially China and India.

A second driver is the industry's shift toward more sustainable and higher-performance catalyst systems. Traditional antimony-based catalysts remain widely used because they are mature, cost-effective, and compatible with existing production lines. However, environmental pressure, food-contact concerns, recycling requirements, and brand-owner sustainability goals are increasing interest in antimony-free alternatives such as titanium- and aluminum-based catalysts.

A third driver is the need for better process efficiency and product quality. Polyester producers are seeking catalysts that can improve reaction speed, color control, thermal stability, acetaldehyde management, and energy efficiency. At the same time, supply-

chain risks around key raw materials are encouraging manufacturers to diversify catalyst technologies, creating opportunities for both established antimony-based products and next-generation catalyst systems.
