Polyester fiber masterbatch is a raw material used to make polyester fiber. It is a granular material made from polyester resin through a specific processing technology. These particles can be manufactured into polyester fiber products of various shapes and uses through melt processing methods, such as extrusion, injection molding, etc. During the preparation process, the polyester resin is first heated to a molten state, and then the molten polyester resin is extruded into granules through equipment such as a mold or extruder, and is cooled to form a masterbatch. Additives such as color, reinforcing agents, and antioxidants can be added to these masterbatches as needed to adjust the performance and appearance of the final polyester fiber product.

The global Polyester Fiber Masterbatch market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
