The global Polyester Film for MLCC market size is predicted to grow from US\$ 4646 million in 2025 to US\$ 6803 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

Polyester film for MLCC (Multilayer Ceramic Capacitor) refers to a specialized thin plastic film made from polyethylene terephthalate (PET), used primarily as a carrier or release film during the manufacturing process of MLCCs. It provides a smooth, stable, and heat-resistant surface to support ceramic layers during stacking and lamination. Key properties include high dimensional stability, chemical resistance, flatness, and cleanliness to avoid defects in capacitor layers. This film is typically coated with a release agent or treated to ensure easy separation after lamination, playing a crucial role in ensuring the precision and reliability of the final electronic components.

The market for polyester film used in MLCC (Multilayer Ceramic Capacitor) manufacturing is experiencing steady growth, driven by rising demand for MLCCs in consumer electronics, automotive, and 5G-related applications. As MLCCs become smaller and more multilayered, the need for high-quality, ultra-flat, and dimensionally stable polyester films has intensified. Key players in the polyester film market are investing in advanced coating technologies and ultra-clean manufacturing environments to meet stringent industry standards. The market is highly specialized, with demand concentrated in East Asia?particularly in South Korea, Japan, and China?where major MLCC manufacturers like Murata, Samsung Electro-Mechanics, and TDK operate.
