Polyether defoamers are chemicals used to control and reduce the formation of foam or bubbles in liquids. These defoamers are typically made from polymer compounds that contain ether groups in their molecular structure.

As environmental and sustainability concerns continue to grow, manufacturers are increasingly favouring the development and use of environmentally friendly defoamers. These products are typically more biodegradable, have a lower environmental impact and may be made from renewable raw materials. Food and beverage processing is an important market that requires defoamers to control foaming to ensure product quality and consistency. Consumer demands for food safety and cleanliness standards are also increasing in this sector. The biotechnology sector is seeing an increasing demand for high performance defoamers that can be used in processes such as biofermentation, cell culture and pharmaceuticals to improve production efficiency and ensure product

quality. Some industries and applications require specific types of defoamers to meet their unique needs. As a result, defoamer manufacturers are increasingly inclined to offer customised solutions to meet the needs of different industries. The development of defoamers continues to evolve as science and technology continue to advance and industry needs change.
