The global Polyether Ether Ketone (PEEK) Interface Screw market size is predicted to grow from US\$ 381 million in 2025 to US\$ 676 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

A Polyether Ether Ketone (PEEK) Interface Screw is a type of orthopedic or spinal implant screw made from PEEK, which is a high-performance thermoplastic polymer known for its exceptional mechanical properties, biocompatibility, and radiolucency.

In orthopedic and spine surgery, interface screws are used to securely fix implants or bone grafts to surrounding bone structures ? commonly in spinal fusion procedures, interbody fusion devices, or fracture fixation systems. When made from PEEK instead of metal, the screw combines mechanical stability with important clinical and imaging advantages.

Polyether Ether Ketone (PEEK) Interface Screws are high-performance medical fasteners used in orthopedic and spinal surgeries to provide secure fixation of implants or bone grafts while offering unique clinical advantages over traditional metal screws. These screws harness PEEK's exceptional material properties ? high strength, biocompatibility, radiolucency, and chemical stability ? making them increasingly popular in advanced surgical procedures worldwide. This article examines the key factors fueling the growth of the global PEEK interface screw market.

Rising Demand for Advanced Spinal and Orthopedic Implants

One of the main drivers of the PEEK interface screw market is the increased adoption of advanced fixation devices in spine surgery and orthopedics. Surgeons and implant

manufacturers favor PEEK screws for applications like spinal fusion cages, interbody devices, and craniofacial fixation due to their metal-free composition and mechanical compatibility with bone.

As spine surgeries, especially minimally invasive and motion-preserving procedures, become more common, the need for next-generation fixation screws that integrate seamlessly with PEEK implants is growing rapidly.

Growing Aging Population and Degenerative Spine Disorders

Globally, the aging population is expanding, and with it, the prevalence of degenerative spine conditions such as herniated discs, spondylolisthesis, and spinal stenosis. Surgical intervention often involves interbody fusion, which uses PEEK cages and matching PEEK screws for secure placement and stabilization.

The rising incidence of age-related musculoskeletal diseases directly drives demand for PEEK-based fixation systems, including interface screws designed to reduce complications and improve post-surgical outcomes.
