Abstracts

The global Polyetheramine market size is predicted to grow from US$ 699 million in 2025 to US$ 1040 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

In 2025, global polyetheramine production stood at 293,000 metric tons, with a global average market price of approximately US$2,440 per metric ton.

Polyetheramines are a class of organic amine compounds featuring a polyether backbone with one or more amino groups at the molecular terminals or side chains; they are typically produced through the amination of polyether polyols. Their molecular structure generally consists of flexible polyoxyalkylene segments combined with highly reactive primary or secondary amine groups. Common polyether backbones include polyoxypropylene, polyoxyethylene, and oxyethylene-oxypropylene copolymer structures. Polyetheramines can be classified based on the number of amino groups (mono-, di-, or multi-functional) or the polyether backbone structure (predominantly oxypropylene, predominantly oxyethylene, or oxyethylene-oxypropylene copolymers). Combinations of varying molecular weights, functionalities, and polyether structures enable the creation of a comprehensive product range, spanning from low-viscosity liquids to high-molecular-weight flexible amine materials.

Polyetheramines combine the flexibility, low glass transition temperature, and good compatibility characteristic of polyether segments with the high chemical reactivity of amino groups, offering significant versatility in performance tuning for material modification and curing systems. Their terminal amino groups can react with various active groups—such as epoxy, isocyanate, and carboxyl groups—while the polyether segments enhance the final material's flexibility, impact resistance, low-temperature performance, and interfacial wetting properties. Compared to some traditional small-molecule amines, polyetheramines generally exhibit lower volatility, superior flexibility,

and a wider range of formulation adjustability; however, significant differences in reactivity, amine value, viscosity, and hydrophilicity exist between grades, necessitating careful selection based on molecular weight, functionality, polyether composition, and terminal amine structure for specific applications. One of the most important applications of polyetheramines is as curing agents and modifiers for epoxy resins; they are widely used in sectors such as wind turbine blades, composite materials, adhesives, anti-corrosion coatings, electrical insulation materials, and construction materials. Additionally, they serve as components in polyurethane and polyurea systems and are utilized in fuel and lubricant additives, surfactants, oilfield chemicals, and certain fine chemical intermediates. Key technical specifications for polyetheramines typically include molecular weight, amine value, functionality, viscosity, color, moisture content, and primary amine content; among these, molecular weight and functionality directly influence reaction rates, cross-linking density, and the properties of the final material. Overall, polyetheramines are fine chemical materials characterized by both functionality and structural designability. They exhibit a high degree of product differentiation, and downstream demand is closely linked to the development of industries such as epoxy resins, composite materials, new energy, construction, and industrial protection.

The Polyetheramine market is poised for continued growth, driven by the increasing demand for advanced materials in renewable energy, automotive, and construction sectors. Technological advancements in production processes and the growing focus on sustainability will continue to shape the industry's future. However, challenges such as the potential removal of policy support and rising raw material costs may impact the sector's profitability and competitive dynamics. Manufacturers will need to innovate and adapt to these changing conditions to maintain market leadership and ensure long-term success.

The leading manufacturers in the global Polyetheramine market are Huntsman (USA) and BASF (Germany), which together hold the vast majority of the market share. Both companies employ continuous production processes using metal catalysts supported on carriers, with stringent requirements for catalyst system selection, process control, and production equipment. Some of these companies also operate sales subsidiaries in China. In contrast, very few Chinese companies have successfully achieved industrial-scale production of Polyetheramines. These companies face significant challenges, including low production efficiency, high costs, and a considerable gap in product quality compared to foreign competitors, making it difficult to fully realize import substitution.

The Polyetheramine market is poised for steady growth over the next 5–10 years, driven by innovation, sustainability, and evolving industrial needs. Companies that can deliver

high-performance, environmentally friendly solutions while maintaining cost competitiveness will be best positioned to lead the next wave of market expansion.

Market growth is primarily influenced by downstream demand and raw material prices, particularly in sectors such as wind power and oil extraction. Leading Polyetheramine manufacturers boast strong R&D capabilities, experienced and innovative teams, and world-class research instruments and equipment. They often collaborate closely with top-tier research institutions to sustain their technological leadership. Downstream customers of Polyetheramine products have high expectations for the performance stability and versatility of these materials.

Despite the competitive challenges, investors remain optimistic about the sector due to the clear trend of global economic recovery. In the future, developed countries will experience moderate market growth, while developing countries are expected to see faster growth rates. Suppliers should recognize the importance of emerging markets and potential applications, particularly in the Asia-Pacific region, and focus on strengthening their sales and distribution networks to penetrate these markets.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the “Polyetheramine Industry Forecast” looks at past sales and reviews total world Polyetheramine sales in 2025, providing a comprehensive analysis by region and market sector of projected Polyetheramine sales for 2026 through 2032. With Polyetheramine sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US$ millions of the world Polyetheramine industry.

This Insight Report provides a comprehensive analysis of the global Polyetheramine landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Polyetheramine portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms’ unique position in an accelerating global Polyetheramine market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Polyetheramine and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up

qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Polyetheramine.

This report presents a comprehensive overview, market shares, and growth opportunities of Polyetheramine market by product type, application, key manufacturers and key regions and countries.

Market Segmentation

Segmentation by Type:

Monofunctional Polyetheramine

Difunctional Polyetheramine

Trifunctional Polyetheramine

Segmentation by Molecular Weight:

Molecular Weight: 200–500 g/mol

Molecular Weight: 500–2,000 g/mol

Molecular Weight: 2,000–5,000+ g/mol

Segmentation by Amine Hydrogen Equivalent:

Low Amine Hydrogen Equivalent: Approx. 50–100 g/eq

Medium Amine Hydrogen Equivalent: Approx. 100–250 g/eq

High Amine Hydrogen Equivalent: Approx. 250–1,000+ g/eq

Segmentation by Application:

2 EXECUTIVE SUMMARY

2.1 World Market Overview
  2.1.1 Global Polyetheramine Annual Sales 2021-2032
  2.1.2 World Current & Future Analysis for Polyetheramine by Geographic Region, 2021, 2025 & 2032
  2.1.3 World Current & Future Analysis for Polyetheramine by Country/Region, 2021, 2025 & 2032
2.2 Polyetheramine Segment by Type
  2.2.1 Monofunctional Polyetheramine
  2.2.2 Difunctional Polyetheramine
  2.2.3 Trifunctional Polyetheramine
  2.2.4 Polyetheramine Sales by Type
    2.2.4.1 Global Polyetheramine Sales Market Share by Type (2021-2026)
    2.2.4.2 Global Polyetheramine Revenue and Market Share by Type (2021-2026)
    2.2.4.3 Global Polyetheramine Sale Price by Type (2021-2026)
2.3 Polyetheramine Segment by Molecular Weight
  2.3.1 Molecular Weight: 200–500 g/mol
  2.3.2 Molecular Weight: 500–2,000 g/mol
  2.3.3 Molecular Weight: 2,000–5,000+ g/mol
  2.3.4 Polyetheramine Sales by Molecular Weight
    2.3.4.1 Global Polyetheramine Sales Market Share by Molecular Weight (2021-2026)
    2.3.4.2 Global Polyetheramine Revenue and Market Share by Molecular Weight (2021-2026)
