Polyformaldehyde, also known as polyoxymethylene (POM), is a high-performance engineering thermoplastic used in various industrial applications. A polyformaldehyde washer would likely refer to a washer made from this material. Washers are thin plates with a hole in the center, often used to distribute the load of a threaded fastener, such as a screw or nut.

Polyformaldehyde washers could be used in situations where a material with high strength, stiffness, and good dimensional stability is required. This material is known for its low friction and excellent wear resistance, making it suitable for applications where parts are subject to repeated sliding or rubbing against each other.

The global Polyformaldehyde Washer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
